

# **ShopSphere**

## **S21 - Promotions, Campaigns and Flash Sales**

Customer Portal

Platform-Specific Sprint Planning Document

This document intentionally defines only the behavior and delivery scope of the selected platform. It does not mix implementation details from the other platforms.

# 1. Sprint Definition

Sprint: S21 - Promotions, Campaigns and Flash Sales

Platform: Customer Portal

Application: ShopSphere

Objective: Implement the customer-facing Promotions, Campaigns and Flash Sales behavior for iOS, Android and Web.

This sprint is complete only when the stated use cases, acceptance criteria and tests pass for this platform.

## 2. Business Use Cases

| ID    | Use Case         | Actor           | Precondition                  | Main Flow                       | Expected Result                                    |
|-------|------------------|-----------------|-------------------------------|---------------------------------|----------------------------------------------------|
| UC-01 | Create promotion | Marketing admin | Authorized role               | Configure campaign and schedule | Promotion becomes active only in valid window.     |
| UC-02 | Apply promotion  | Customer        | Promotion active and eligible | View/buy product                | Customer receives valid promotional price/content. |

## 3. Detailed Implementation Plan

1. Display active sale prices, promotion banners and featured sections.
2. Ensure checkout revalidates promotion state.

## 4. Data / State / Contract Scope

- No direct database changes. Data is accessed through backend APIs.

### API / Integration Contract

- Consume the corresponding /api/v1 feature APIs defined by the backend sprint document.

## 5. Rules and Expected Behavior

- The platform must rely on the backend as the source of truth for business rules.
- Do not expose stack traces, secrets or internal implementation details to end users.
- Handle loading, empty, validation and error states explicitly.
- Requests that can be retried must be safe from duplicate side effects where the feature requires idempotency.
- Ownership and authorization must be checked server-side for protected data.

## 6. Acceptance Criteria

- Customer journey is complete on iOS, Android and Web where the feature applies.
- UI consumes backend responses rather than duplicating business calculations.
- Loading, empty, validation and error states are implemented.
- Unauthorized or stale data is handled safely.

## 7. Test Cases

| TC        | Scenario                | Expected Result                                                                                               |
|-----------|-------------------------|---------------------------------------------------------------------------------------------------------------|
| TC-S21-01 | Overlapping promotions  | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |
| TC-S21-02 | Expired promotion       | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |
| TC-S21-03 | Future promotion        | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |
| TC-S21-04 | Flash stock exhausted   | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |
| TC-S21-05 | Removed during checkout | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |

| TC        | Scenario                   | Expected Result                                                                                               |
|-----------|----------------------------|---------------------------------------------------------------------------------------------------------------|
| TC-S21-06 | Timezone boundary          | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |
| TC-S21-07 | Unauthorized campaign edit | Operation is handled according to the defined business rule; no incorrect state or security leak is produced. |

## 8. Sprint Exit Checklist

- Implementation completed only for this platform.
- All primary and negative use cases pass.
- API contracts are implemented/consumed as defined.
- Validation and authorization tests pass.
- Loading/empty/error handling is verified where applicable.
- No critical or blocker defect remains.
- Automated tests pass in CI.
- Documentation and contract changes are committed.

## 9. Out of Scope for This Document

- Implementation behavior of Backend + DB. That behavior belongs in the separate S21 document for that platform.
- Implementation behavior of Admin Portal. That behavior belongs in the separate S21 document for that platform.
