

ShopSphere

S22 - Reporting, Analytics and Exports

Admin Portal

Platform-Specific Sprint Planning Document

This document intentionally defines only the behavior and delivery scope of the selected platform. It does not mix implementation details from the other platforms.

1. Sprint Definition

Sprint: S22 - Reporting, Analytics and Exports

Platform: Admin Portal

Application: ShopSphere

Objective: Implement only the admin-web behavior relevant to Reporting, Analytics and Exports; do not implement customer behavior in this document.

This sprint is complete only when the stated use cases, acceptance criteria and tests pass for this platform.

2. Business Use Cases

ID	Use Case	Actor	Precondition	Main Flow	Expected Result
UC-01	Run report	Admin	Report permission	Choose filters and generate	Filtered report is returned.
UC-02	Export report	Admin	Export permission	Request export	Authorized export is generated and downloadable.

3. Detailed Implementation Plan

1. Implement report filters, result tables/charts and export workflow.
2. Restrict financial/customer-sensitive reports by role.

4. Data / State / Contract Scope

- No direct database changes. Data is accessed through backend APIs.

API / Integration Contract

- Consume the corresponding secured /api/v1 admin/customer operational APIs defined by the backend sprint document.

5. Rules and Expected Behavior

- The platform must rely on the backend as the source of truth for business rules.
- Do not expose stack traces, secrets or internal implementation details to end users.
- Handle loading, empty, validation and error states explicitly.
- Requests that can be retried must be safe from duplicate side effects where the feature requires idempotency.
- Ownership and authorization must be checked server-side for protected data.

6. Acceptance Criteria

- Only authorized admin roles can access the feature.
- Admin UI reflects server state and permission boundaries.
- Validation, loading, empty, error and confirmation states are implemented where relevant.
- No customer UI behavior is defined in this document.

7. Test Cases

TC	Scenario	Expected Result
TC-S22-01	Empty report	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-02	Invalid date range	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-03	Large export	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-04	Export timeout	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.

TC	Scenario	Expected Result
TC-S22-05	Concurrent export	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-06	Rounding discrepancy	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-07	Unauthorized report/export	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S22-08	Historical deleted entity	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.

8. Sprint Exit Checklist

- Implementation completed only for this platform.
- All primary and negative use cases pass.
- API contracts are implemented/consumed as defined.
- Validation and authorization tests pass.
- Loading/empty/error handling is verified where applicable.
- No critical or blocker defect remains.
- Automated tests pass in CI.
- Documentation and contract changes are committed.

9. Out of Scope for This Document

- Implementation behavior of Backend + DB. That behavior belongs in the separate S22 document for that platform.
- Implementation behavior of Customer Portal. That behavior belongs in the separate S22 document for that platform.
