

ShopSphere

S24 - Performance, Full Regression and Production Release

Admin Portal

Platform-Specific Sprint Planning Document

This document intentionally defines only the behavior and delivery scope of the selected platform. It does not mix implementation details from the other platforms.

1. Sprint Definition

Sprint: S24 - Performance, Full Regression and Production Release

Platform: Admin Portal

Application: ShopSphere

Objective: Implement only the admin-web behavior relevant to Performance, Full Regression and Production Release; do not implement customer behavior in this document.

This sprint is complete only when the stated use cases, acceptance criteria and tests pass for this platform.

2. Business Use Cases

ID	Use Case	Actor	Precondition	Main Flow	Expected Result
UC-01	Release production	Release owner	All required gates passed	Deploy approved builds/configuration, run smoke tests	Production is serving the expected version and monitoring is healthy.
UC-02	Recover from failure	Release/ops	Rollback criteria met	Execute rollback/recovery procedure	Service is restored without data corruption.

3. Detailed Implementation Plan

1. Run complete admin regression for auth/RBAC/products/inventory/customers/orders/payments/coupons/promotions/reports/audit.
2. Validate browser compatibility, exports and production build.

4. Data / State / Contract Scope

- No direct database changes. Data is accessed through backend APIs.

API / Integration Contract

- Consume the corresponding secured /api/v1 admin/customer operational APIs defined by the backend sprint document.

5. Rules and Expected Behavior

- The platform must rely on the backend as the source of truth for business rules.
- Do not expose stack traces, secrets or internal implementation details to end users.
- Handle loading, empty, validation and error states explicitly.
- Requests that can be retried must be safe from duplicate side effects where the feature requires idempotency.
- Ownership and authorization must be checked server-side for protected data.

6. Acceptance Criteria

- Only authorized admin roles can access the feature.
- Admin UI reflects server state and permission boundaries.
- Validation, loading, empty, error and confirmation states are implemented where relevant.
- No customer UI behavior is defined in this document.

7. Test Cases

TC	Scenario	Expected Result
TC-S24-01	Load spike	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-02	Database failure	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-03	Redis failure	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-04	Payment outage	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.

TC	Scenario	Expected Result
TC-S24-05	Shipping outage	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-06	Notification outage	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-07	Rollback migration	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-08	Expired secret	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-09	Production API misconfiguration	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-10	Mobile release build failure	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.
TC-S24-11	Admin export failure	Operation is handled according to the defined business rule; no incorrect state or security leak is produced.

8. Sprint Exit Checklist

- Implementation completed only for this platform.
- All primary and negative use cases pass.
- API contracts are implemented/consumed as defined.
- Validation and authorization tests pass.
- Loading/empty/error handling is verified where applicable.
- No critical or blocker defect remains.
- Automated tests pass in CI.
- Documentation and contract changes are committed.

9. Out of Scope for This Document

- Implementation behavior of Backend + DB. That behavior belongs in the separate S24 document for that platform.
- Implementation behavior of Customer Portal. That behavior belongs in the separate S24 document for that platform.
